

How Stakeholder Input is Collected

- SHAC is a formal Brown Act committee established in the JPA and governed by a charter.
- Provides structured input and makes recommendations to the GSA Board.
- Staff also gathers public feedback through comment periods, workshops, and outreach.
- Example: The Local Expert Group (LEG) was created based on stakeholder suggestions to involve CSUC faculty.

How Stakeholder Input is Integrated

- SHAC feedback plays a key role in supporting Board decisions.
- SHAC members offer insight on policy and technical matters.
- Public input helps identify community priorities and perspectives.
- All input is reviewed in relation to agency goals and feasibility.

How Input is Communicated

- Staff is improving how feedback is documented in memos and reports.
- Input is summarized and linked to specific agenda items.
- Example: The April 9, 2025 memo showed how input guided SHAC discussion and recommendations.
- Staff remains committed to clear, transparent communication.

Many of you bring years of experience with SGMA and the GSA, while new SHAC members and community participants arrive with varying levels of familiarity. Thinking back to your own first days, what background information or resources most helped you ramp up? Are there any external guides, websites, or tools you still find yourself recommending?

As SHAC representatives and liaisons to the broader community, you have a unique view of where the public may struggle with this work. Which topics, concepts, or processes do community members most often find unclear? What suggestions do you have for staff to address those areas and make our communications more accessible?
