2022 Water Year Annual Report

Appendix A

Characteristics and Hydrographs of Representative Monitoring Site (RMS) Wells and County Wide Groundwater Contour Maps for the Primary Aquifer

VINA Subbasin - State Well Number (SWN): 20N02E09L001M

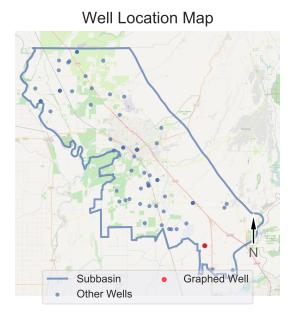

Sustainable Management Criteria:

IM (2027) = 93.0 ft AMSL MO = 91.0 ft AMSL MT = 30.0 ft AMSL

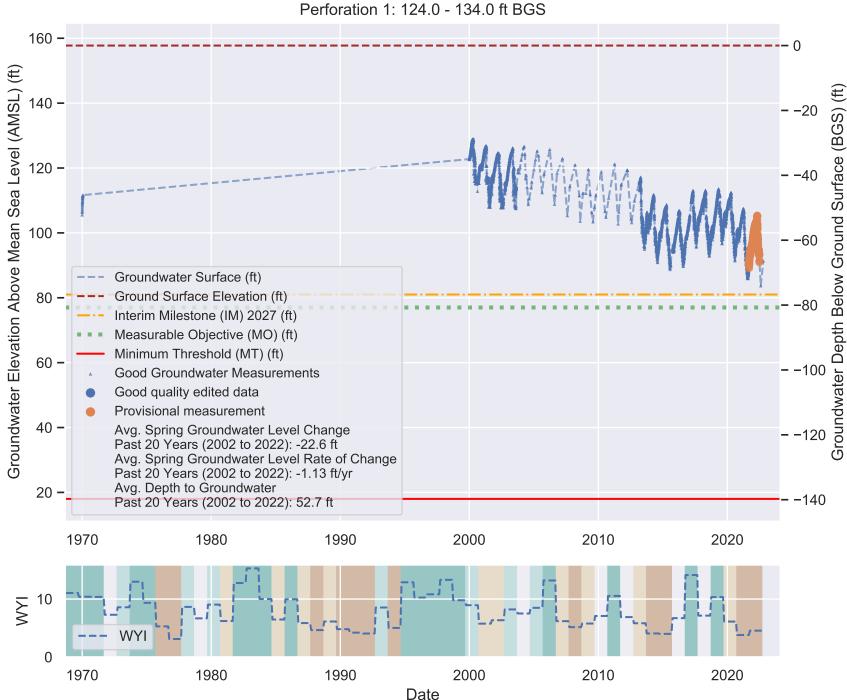

VINA Subbasin - State Well Number (SWN): 20N02E24C001M

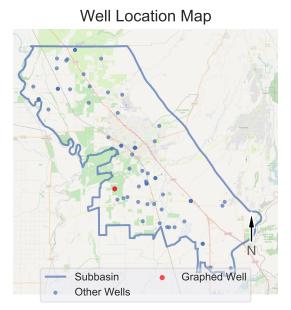

Sustainable Management Criteria:

IM (2027) = 81.0 ft AMSL MO = 77.0 ft AMSL MT = 18.0 ft AMSL

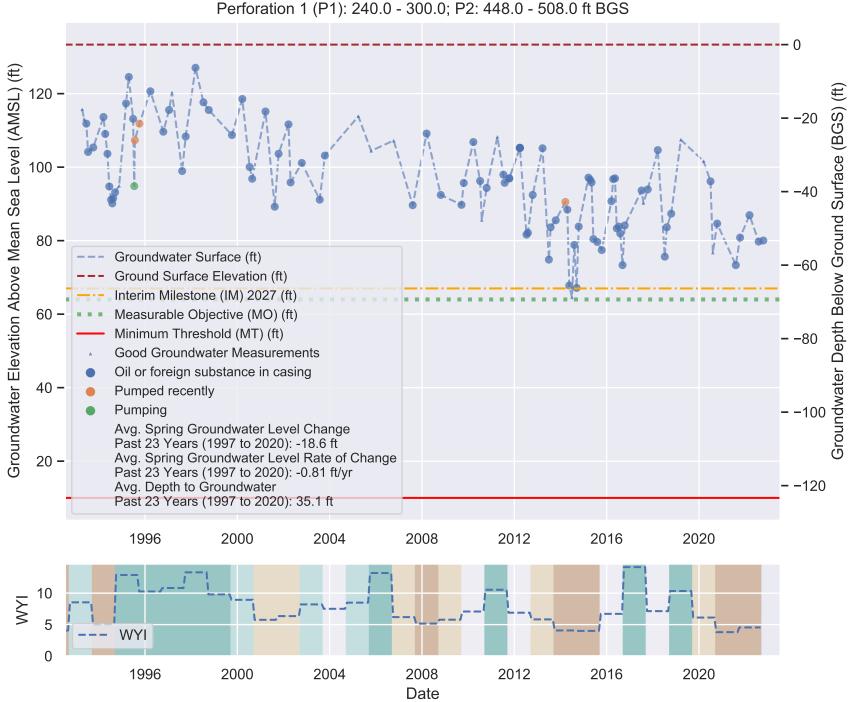

VINA Subbasin - State Well Number (SWN): 21N01E21C001M

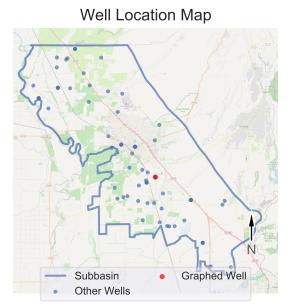

Sustainable Management Criteria:

IM (2027) = 67.0 ft AMSL MO = 64.0 ft AMSL MT = 10.0 ft AMSL

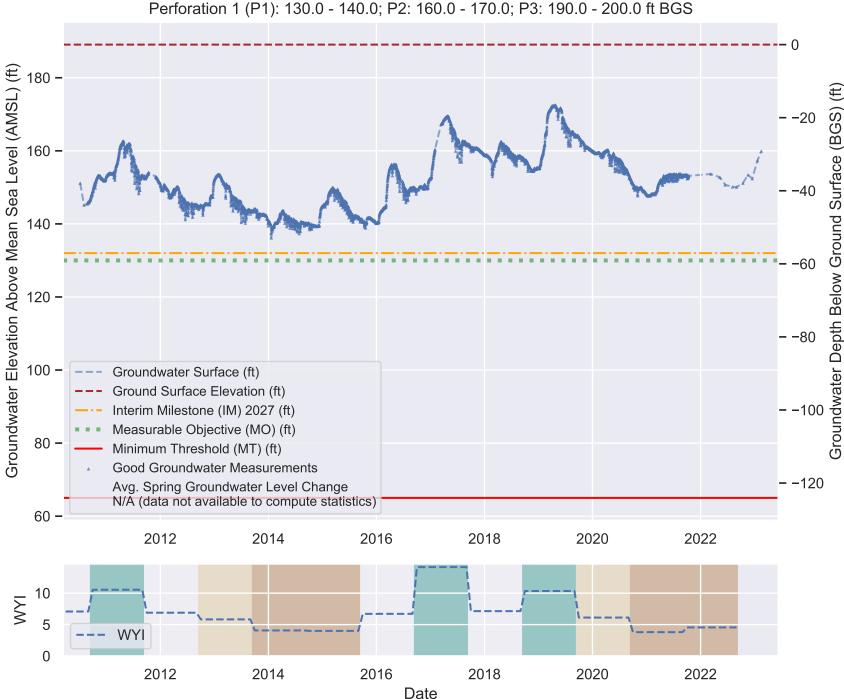

VINA Subbasin - State Well Number (SWN): 21N02E18C003M

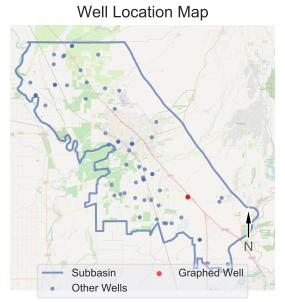

Sustainable Management Criteria:

IM (2027) = 132.0 ft AMSL MO = 130.0 ft AMSL MT = 65.0 ft AMSL

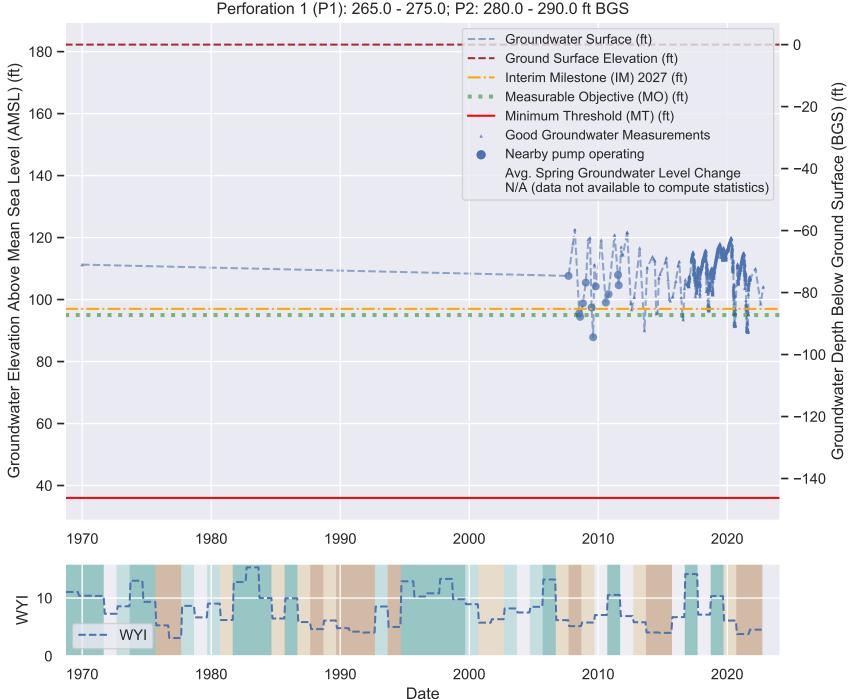

VINA Subbasin - State Well Number (SWN): 21N02E26E005M

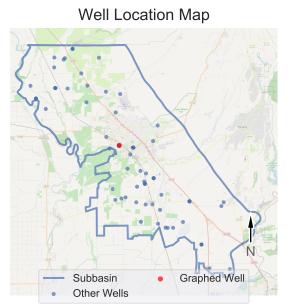

Sustainable Management Criteria:

IM (2027) = 97.0 ft AMSL MO = 95.0 ft AMSL MT = 36.0 ft AMSL

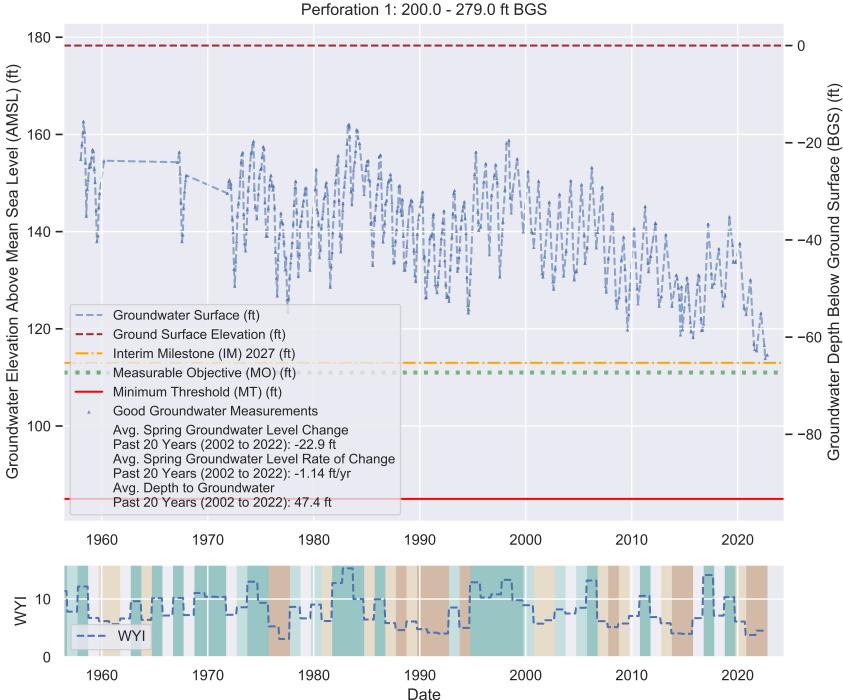

VINA Subbasin - State Well Number (SWN): 22N01E28J003M

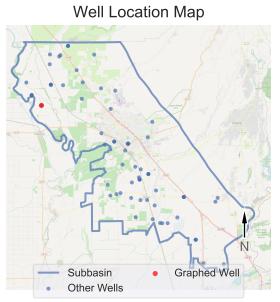

Sustainable Management Criteria:

IM (2027) = 113.0 ft AMSL MO = 111.0 ft AMSL MT = 85.0 ft AMSL

VINA Subbasin - State Well Number (SWN): 22N01W05M001M

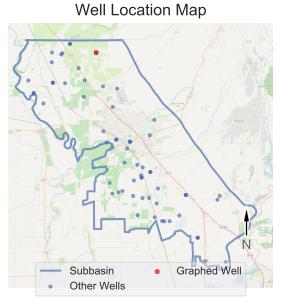

Sustainable Management Criteria:

IM (2027) = 116.0 ft AMSL MO = 115.0 ft AMSL MT = 31.0 ft AMSL

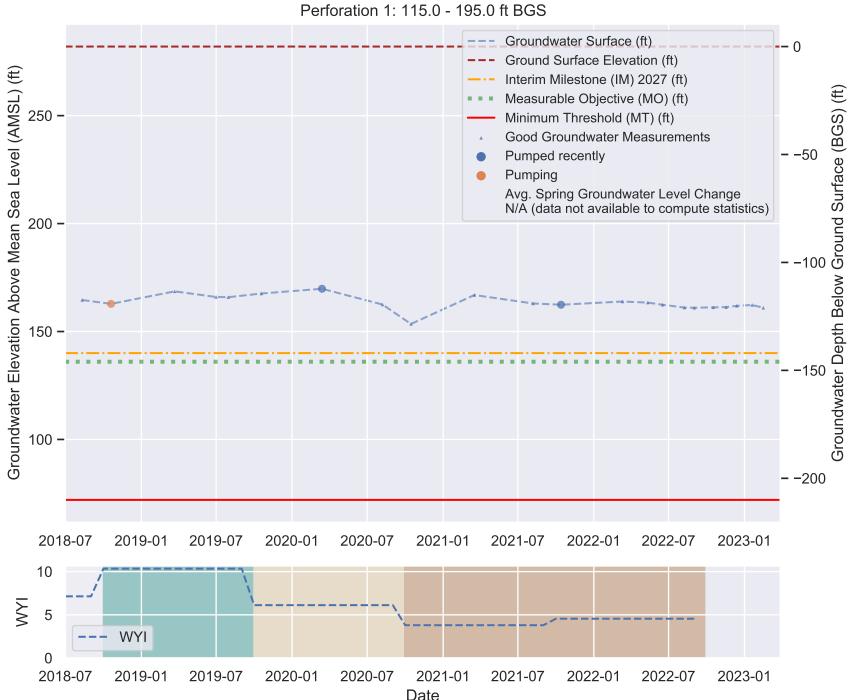

VINA Subbasin - State Well Number (SWN): 23N01E07H001M

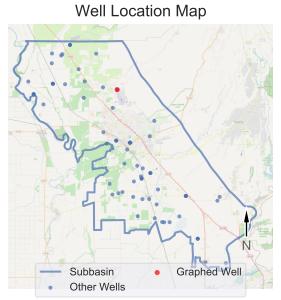

Sustainable Management Criteria:

IM (2027) = 140.0 ft AMSL MO = 136.0 ft AMSL MT = 72.0 ft AMSL

VINA Subbasin - State Well Number (SWN): 23N01E33A001M

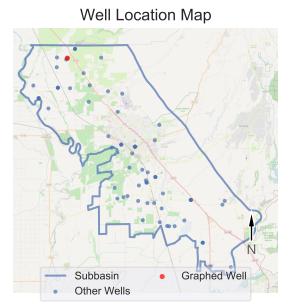

Sustainable Management Criteria:

IM (2027) = 128.0 ft AMSL MO = 125.0 ft AMSL MT = 72.0 ft AMSL

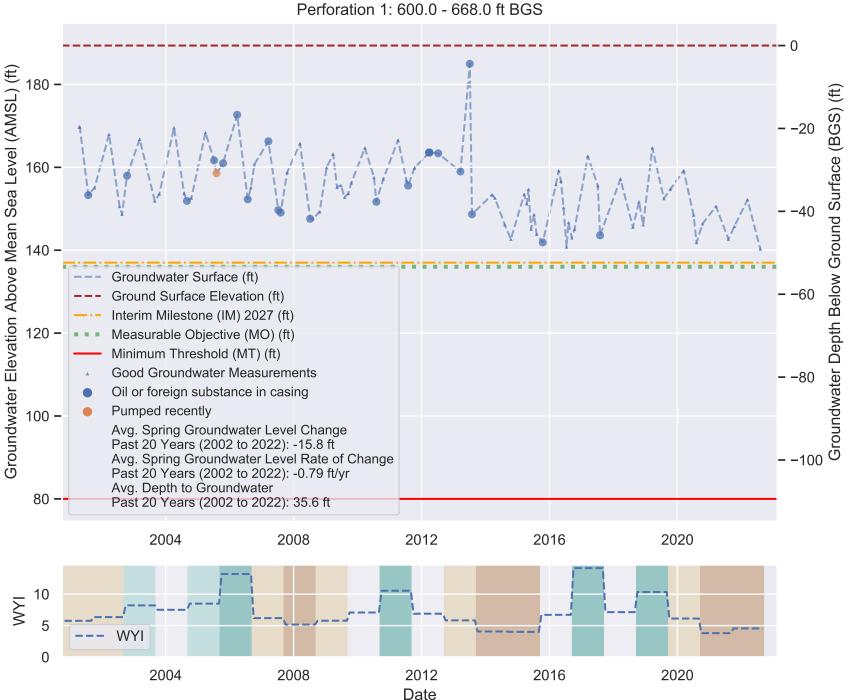

VINA Subbasin - State Well Number (SWN): 23N01W10E001M

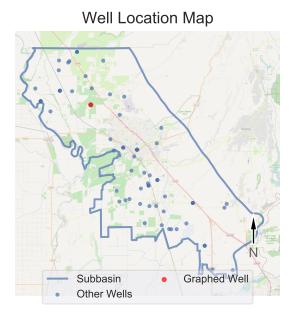

Sustainable Management Criteria:

IM (2027) = 137.0 ft AMSL MO = 136.0 ft AMSL MT = 80.0 ft AMSL

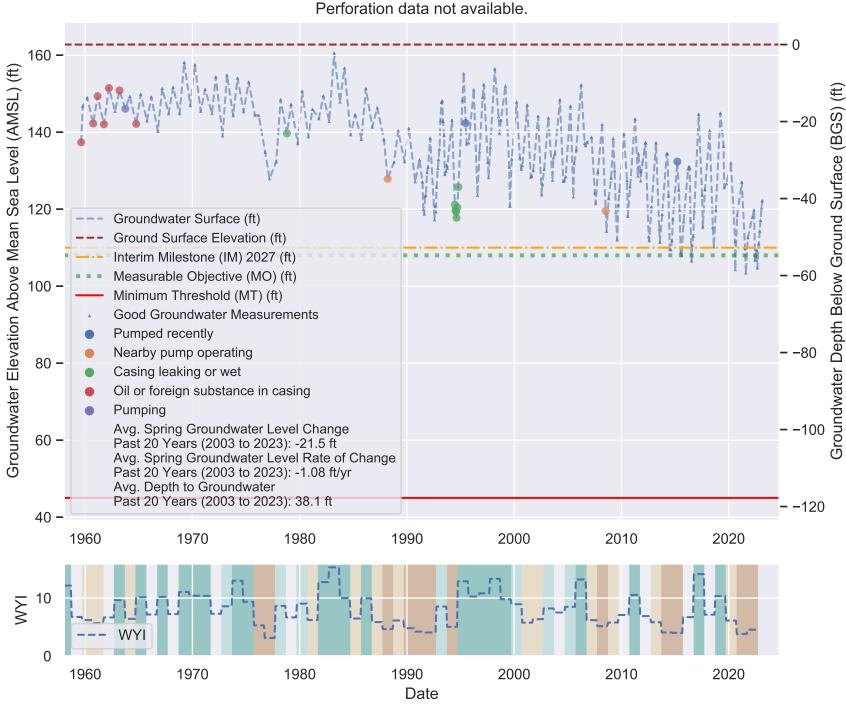

VINA Subbasin - State Well Number (SWN): 23N01W36P001M

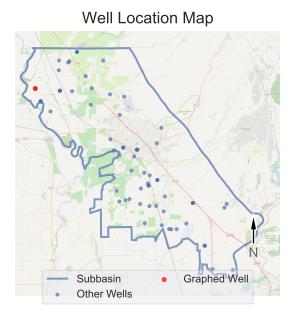

Sustainable Management Criteria:

IM (2027) = 110.0 ft AMSL MO = 108.0 ft AMSL MT = 45.0 ft AMSL

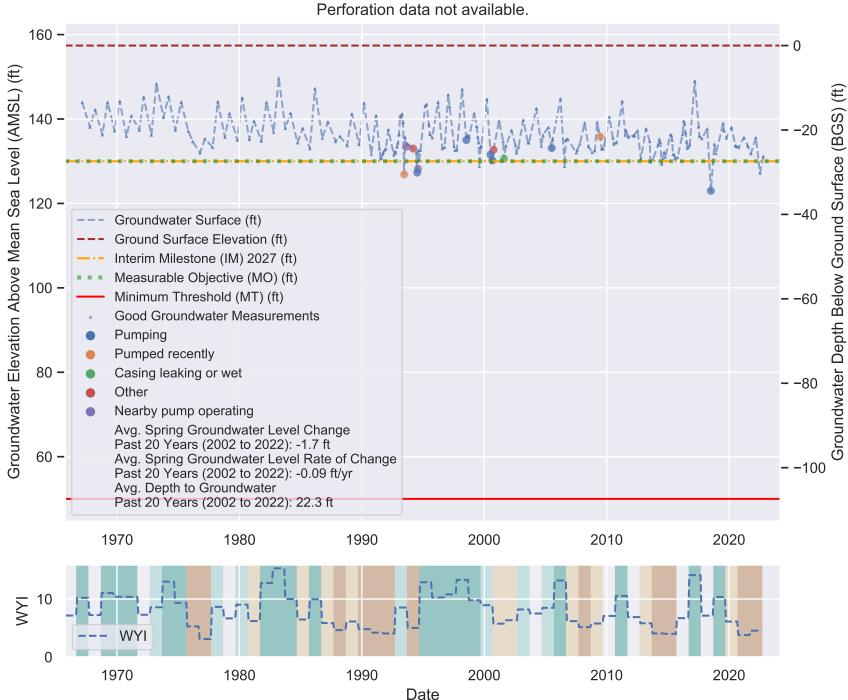

VINA Subbasin - State Well Number (SWN): 23N02W25C001M

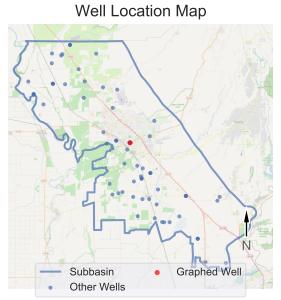

Sustainable Management Criteria:

IM (2027) = 130.0 ft AMSL MO = 130.0 ft AMSL MT = 50.0 ft AMSL

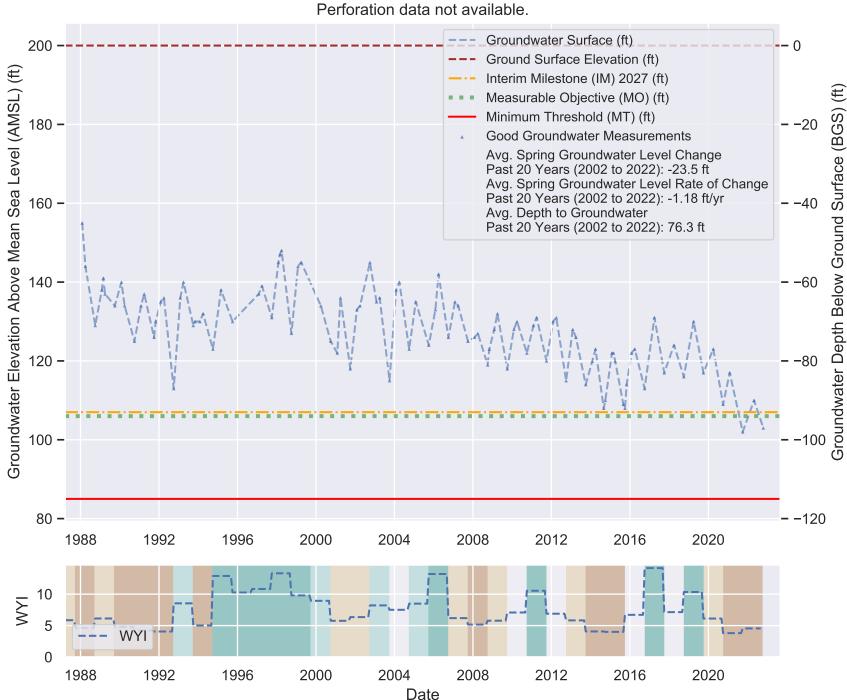

VINA Subbasin - State Well Number (SWN): CWSCH01b

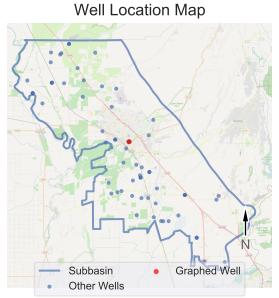

Sustainable Management Criteria:

IM (2027) = 107.0 ft AMSL MO = 106.0 ft AMSL MT = 85.0 ft AMSL

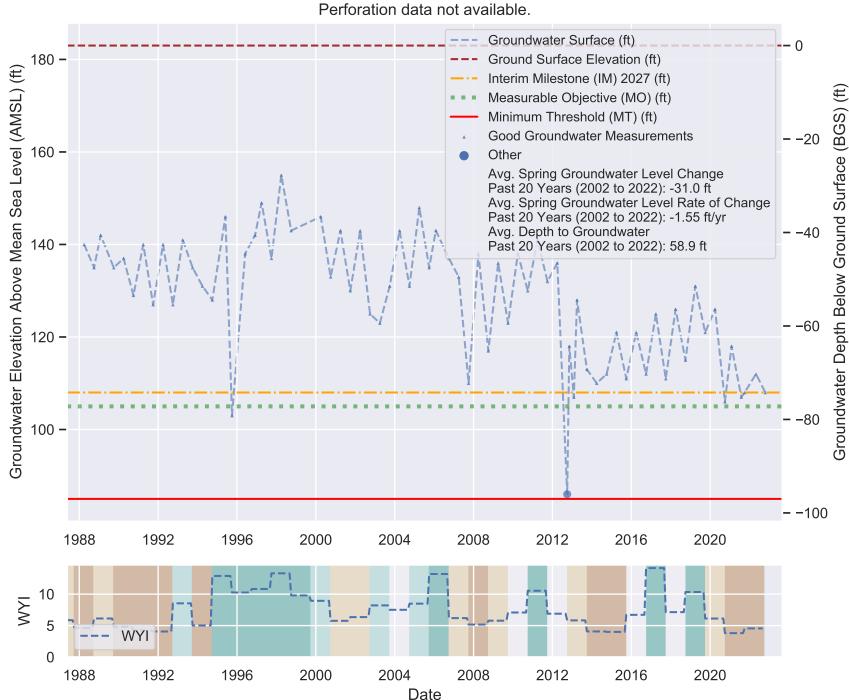

VINA Subbasin - State Well Number (SWN): CWSCH02

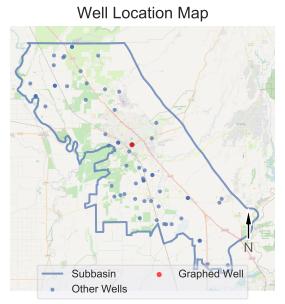

Sustainable Management Criteria:

IM (2027) = 108.0 ft AMSL MO = 105.0 ft AMSL MT = 85.0 ft AMSL

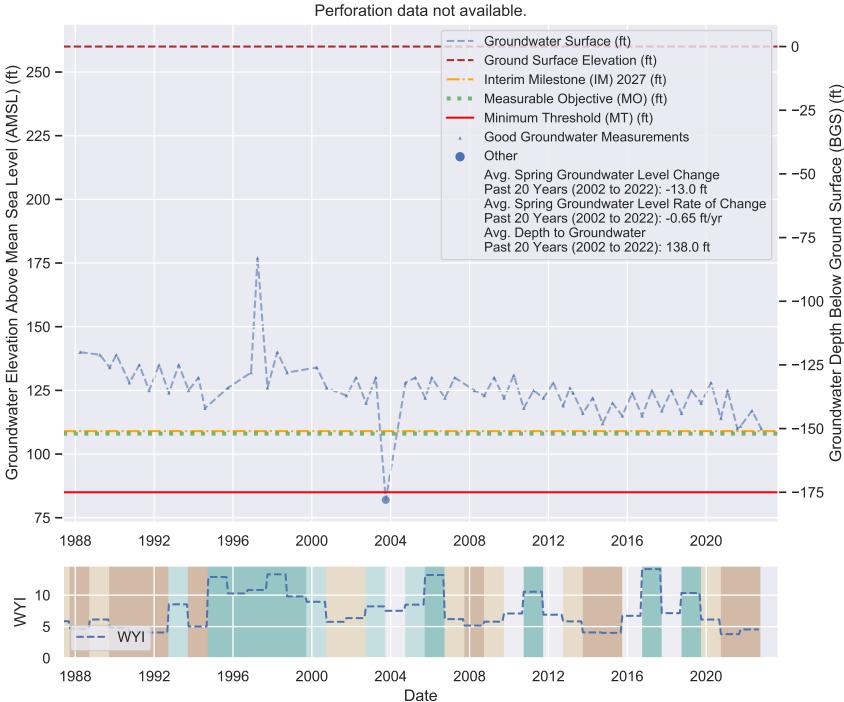

VINA Subbasin - State Well Number (SWN): CWSCH03

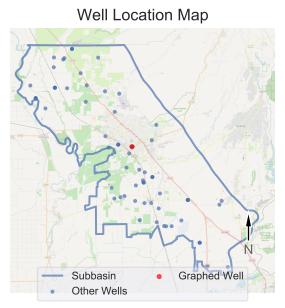

Sustainable Management Criteria:

IM (2027) = 109.0 ft AMSL MO = 108.0 ft AMSL MT = 85.0 ft AMSL

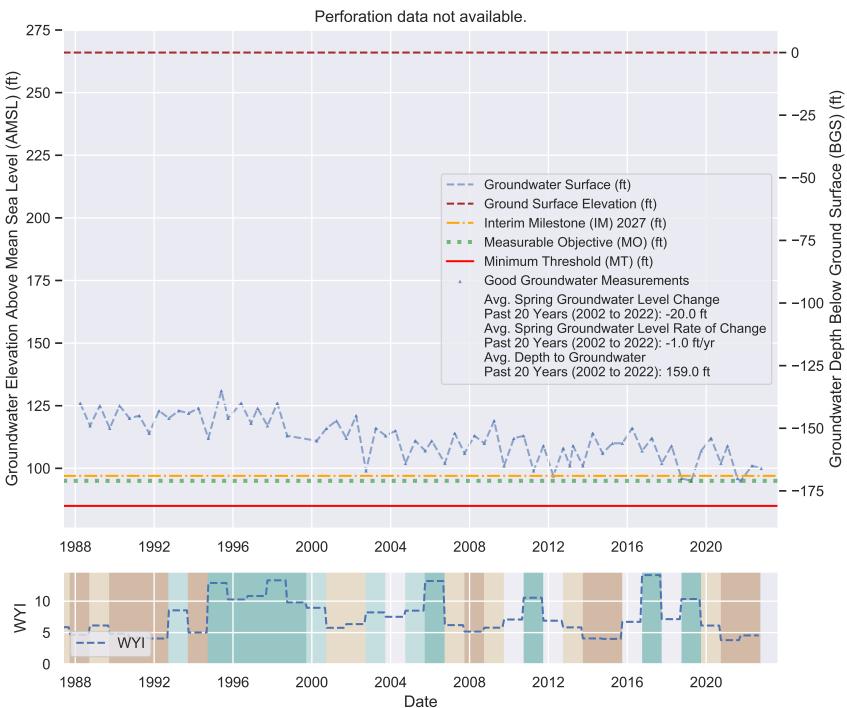

VINA Subbasin - State Well Number (SWN): CWSCH07

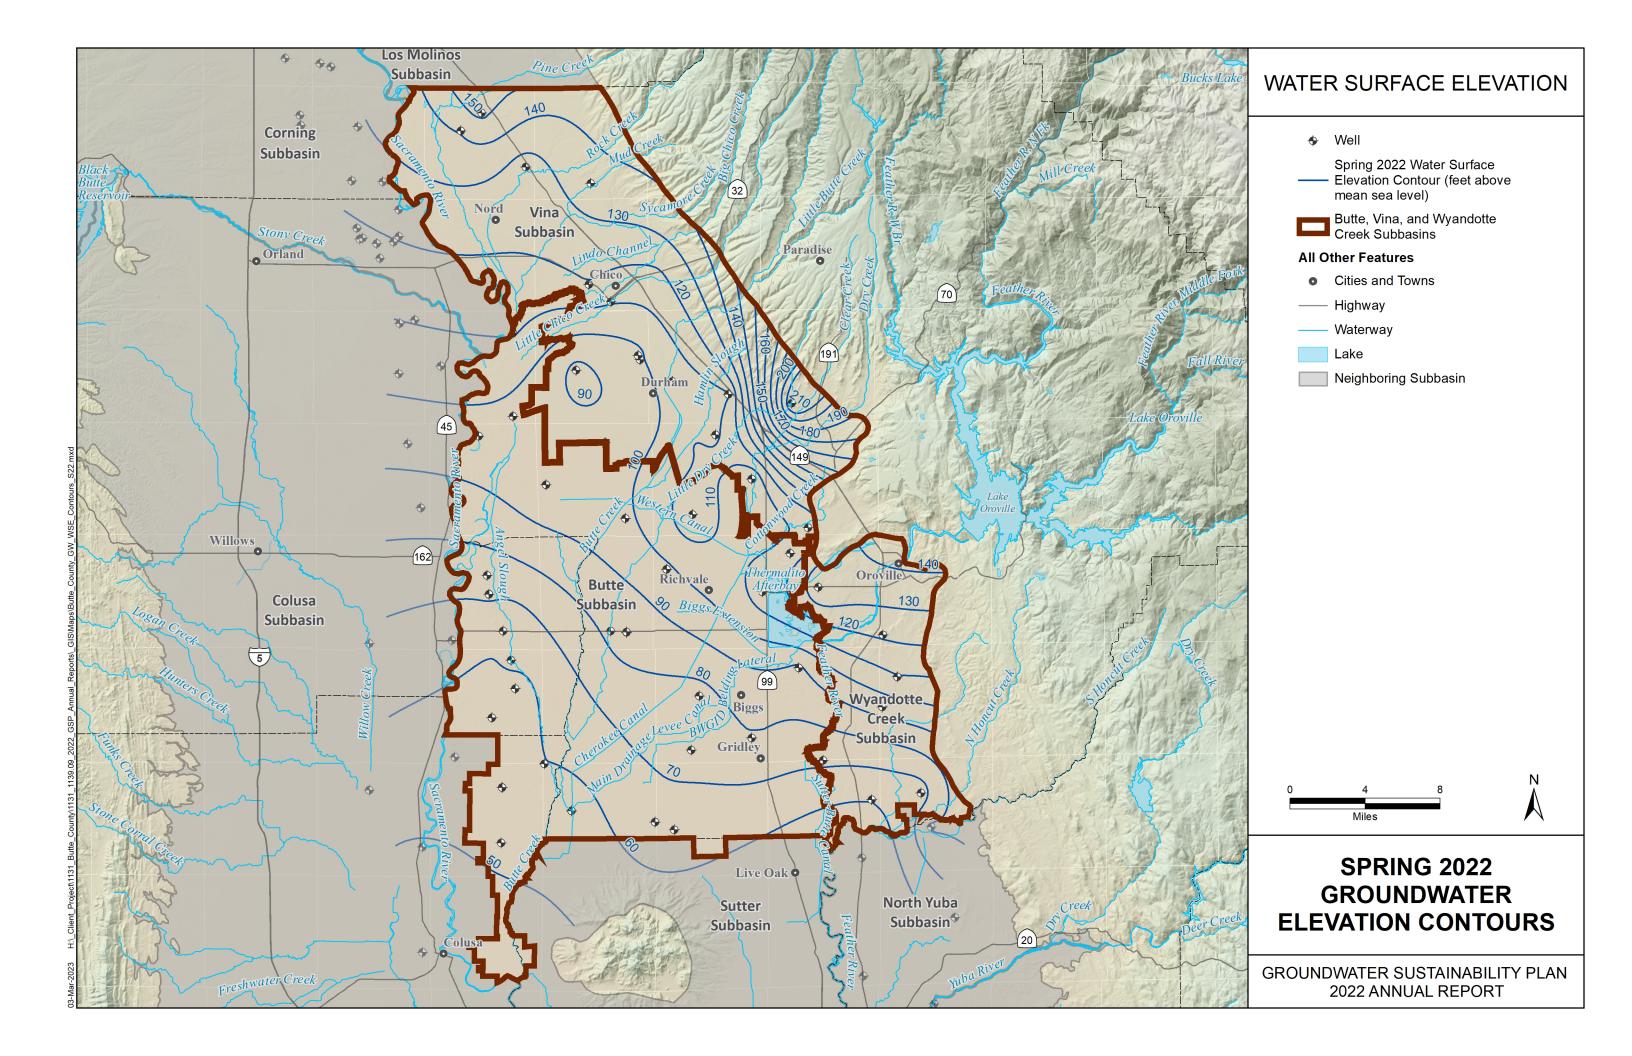

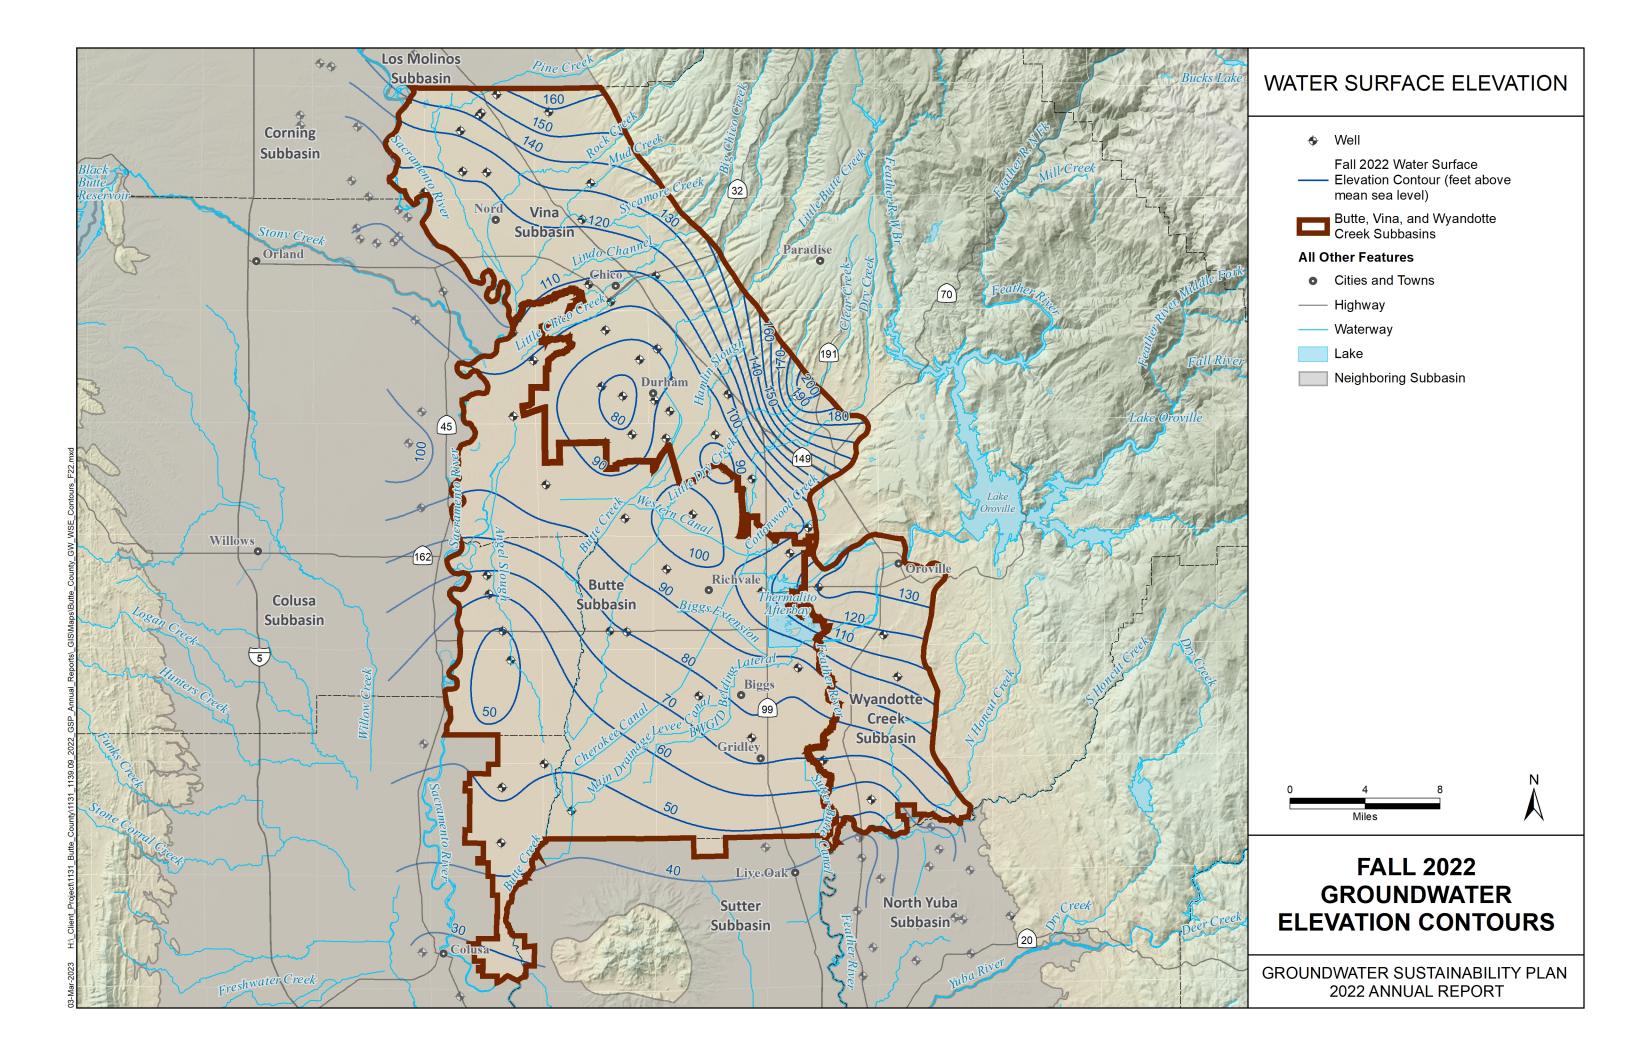

Sustainable Management Criteria:

IM (2027) = 97.0 ft AMSL MO = 95.0 ft AMSL MT = 85.0 ft AMSL

2022 Water Year Annual Report

Appendix B

Explanation of Sustainable Management Criteria

Appendix B: Explanation of Sustainable Management Criteria

The Sustainable Groundwater Management Act (SGMA) requires a Groundwater Sustainability Plan (GSP) to define Sustainable Management Criteria (SMC) for the groundwater subbasin. The SMC offer guideposts and guardrails for groundwater managers seeking to achieve sustainable groundwater management. SGMA defines sustainable groundwater management as "the management and use of groundwater in a manner that can be maintained during the planning and implementation horizon without causing undesirable results," where the planning and implementation horizon is 50 years with the first 20 years spent working toward achieving sustainable groundwater management and the following 30 years (and beyond) spent maintaining it (California Water Code §10721).

"Undesirable Results" are associated with up to six Sustainability Indicators (SI), including groundwater levels, groundwater storage, water quality, seawater intrusion, land subsidence, and interconnected surface water. SGMA defines undesirable results as those having significant and unreasonable negative impacts. Failure to avoid undesirable results on the part of the GSAs may lead to intervention by the State. Once the sustainability goal and undesirable results have been locally identified, projects and management actions are formulated to achieve the sustainability goal and avoid undesirable results.

SI and associated undesirable results, if significant and unreasonable

The Vina Subbasin is divided into three management areas (MAs): North, Chico, and South. The associated undesirable results for each SI have been defined similarly across the three MAs within the Vina Subbasin. In turn, the rationale and approach for determining Minimum Thresholds and Measurable Objectives for each SI are the same across all MAs in the Vina Subbasin.

The terminology for describing SMC is defined as follows:

Undesirable Results – Significant and unreasonable negative impacts associated with each SI.

Minimum Threshold (MT) – Quantitative threshold for each SI used to define the point at which undesirable results may begin to occur.

Measurable Objective (MO) – Quantitative target that establishes a point above the MT that allows for a range of active management to prevent undesirable results.

Margin of Operational Flexibility – The range of active management between the MT and the MO.

Interim Milestones (IMs) – Targets set in increments of five years over the implementation period of the GSP offering a path to sustainability.

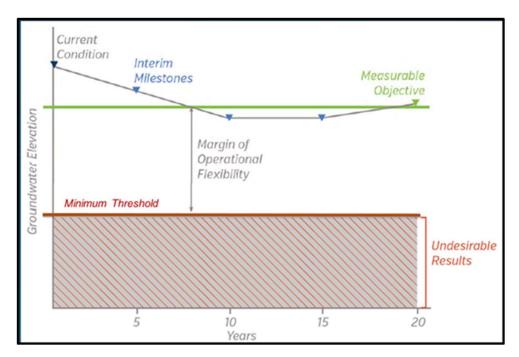

Illustration of Terms Used for Describing Sustainable Management Criteria Using the Groundwater Level SI

The Figure above illustrates these terms for the groundwater level SI.

SI are intended to be measured and compared against quantifiable SMC throughout a monitoring framework of Representative Monitoring Site (RMS) wells. Ongoing monitoring of SI can:

Determine compliance with the adopted GSP

Offer a means to evaluate the effectiveness of projects and management actions over time

Allow for course correction and adaptation in five-year updates

Facilitate understanding among diverse stakeholders

Support decision-making on the part of the GSAs into the future

The SMC for the Vina Subbasin is fully explained and defined in Section 3 of the GSP available here:

https://sgma.water.ca.gov/portal/gsp/preview/86

2022 Water Year Annual Report

Appendix C GSP Annual Reporting Elements Guide

	Groundwater Sustainability F	Plan Annual Report Elements G	uide
Basin Name	Sacramento Valley- Vina Subbasin		
GSP Local ID	·		
California Code of Regulations - GSP Regulation Sections	Groundwater Sustainability Plan Elements	Document page number(s) that address the applicable GSP element.	Notes: Briefly describe the GSP element does not apply.
Article 5	Plan Contents		
Subarticle 4	Monitoring Networks		
§ 354.40	Reporting Monitoring Data to the Department		
	Monitoring data shall be stored in the data management system developed pursuant to Section 352.6. A copy of the monitoring data shall be included in the Annual Report and submitted electronically on forms provided by the Department.	38	
	Note: Authority cited: Section 10733.2, Water Code. Reference: Sections 10728, 10728.2, 10733.2 and 10733.8, Water Code.		
Article 7	Annual Reports and Periodic Evaluations by the Agency		
§ 356.2	Annual Reports		
	Each Agency shall submit an annual report to the Department by April 1 of each year following the adoption of the Plan. The annual report shall include the following components for the preceding water year:		
	(a) General information, including an executive summary and a location map		
	depicting the basin covered by the report.	7-32	
	(b) A detailed description and graphical representation of the following conditions		
	of the basin managed in the Plan: (1) Groundwater elevation data from monitoring wells identified in the monitoring network shall be analyzed and displayed as follows:		
	(A) Groundwater elevation contour maps for each principal aquifer in the basin illustrating, at a minimum, the seasonal high and seasonal low groundwater		
	conditions.	35-36	
	(B) Hydrographs of groundwater elevations and water year type using historical data to the greatest extent available, including from January 1, 2015, to current reporting year.	64-80	
	(2) Groundwater extraction for the preceding water year. Data shall be collected using the best available measurement methods and shall be presented in a table that summarizes groundwater extractions by water use sector, and identifies the method of measurement (direct or estimate) and accuracy of measurements, and a map that illustrates the general location and volume of groundwater extractions.	40-43	
	(3) Surface water supply used or available for use, for groundwater recharge or inlieu use shall be reported based on quantitative data that describes the annual volume and sources for the preceding water year.	44	
	(4) Total water use shall be collected using the best available measurement methods and shall be reported in a table that summarizes total water use by water use sector, water source type, and identifies the method of measurement (direct or estimate) and accuracy of measurements. Existing water use data from the most recent Urban Water Management Plans or Agricultural Water Management Plans within the basin may be used, as long as the data are reported by water year.	44	
	(5) Change in groundwater in storage shall include the following:		

California Code of Regulations - GSP Regulation Sections	Groundwater Sustainability Plan Elements	Document page number(s) that address the applicable GSP element.	Notes: Briefly describe the GSP element does not apply.
	(A) Change in groundwater in storage maps for each principal aquifer in the basin.	50	
	(B) A graph depicting water year type, groundwater use, the annual change in		
	groundwater in storage, and the cumulative change in groundwater in storage for		
	the basin based on historical data to the greatest extent available, including from		
	January 1, 2015, to the current reporting year.	47	
	(c) A description of progress towards implementing the Plan, including achieving		
	interim milestones, and implementation of projects or management actions since		
	the previous annual report.	51-61
